# PROTECT-IT™ UPRIGHT GUARDS

## PALLET RACKING PROTECTION

Protect-it™ Column Guards offer exceptional performance in pallet rack protection. Pallet racking is not designed to be struck by fork-lifts. Low speed collisions can lead to structural damage that is costly to repair and places workers at risk. Rack damage is an occupational health and safety issue.

The Protect-it™ Upright Guard combines Computer Aided Engineering and advanced thermoplastic materials to deliver a product that can absorb large impacts and easily attaches to a column without additional fasteners. Protect-it™ has an outer wall that is integrally moulded to a series of curved energy

absorbers that act as springs to the front and sides and provides two levels of protection.

**Protecting your pallet racking upright columns improves safety and protects your investment**

- ✓ **Securely grips the upright (no separate fasteners)**
- ✓ **Recommend 3-4 per upright**
- ✓ **Passes FEM 10.2.02 frontal impact test**
- ✓ **After moderate impacts it returns to its original shape**

## PRODUCT RANGE

Fits P75, P90 and P100 uprights.

Please state size of upright when ordering.

## FREQUENTLY ASKED QUESTIONS

### Are they easy to fit to uprights?

Protect-it™ takes just seconds to install by hand. The design incorporates an ingenious spring clip design that enables Protect-it™ to securely grip the upright and automatically adjust its width to suit a range of upright sizes.

### Why is the product so small?

Most impacts occur within 300mm (11.8") from the floor. The small size of Protect-it™ delivers a number of benefits:

- Impact damage to protection devices typically occurs in a small area.
- Being small allows damaged units to be replaced individually which is more cost effectively than single-piece products.
- Provides the opportunity to have a combination of recognised contrasting safety colours (black/yellow)

### What about safety inspections?

Protect-it™ takes just seconds to remove and re-install, allowing Safety Inspectors to conduct fast and effective visual inspections of the upright.

### Do Protect-it™ Column Guards meet the necessary design standards?

Protect-it™ passes the frontal impact test specified in the European Racking Code FEM 10.2.02.
